BOWS

2018 CATALOG

The Journey

Sometimes in life things just fall into place. Striker Bows was born from a desire to harvest a deer with a small and sleek traditional bow that wasn't available on the market, so Rick Ellis went to work building his own. Those first simple designs out of a garage in Ohio have evolved into a unique line of longbows and recurves sold across the globe. A family business from the beginning, Rick's sons, Dusty and John, have gone from helping dad whenever needed to full partners in bringing ingenuity and performance to the traditional bow market.

Twenty years of hard work and constant innovation have led to the introduction of the RK1. This bow incorporates the performance and precision that Striker is known for, while adding new options and flexibility that the modern archer is accustomed to. The drive for excellence has taken Striker from a one-man operation to one of the leading traditional bow companies in the world. The Striker Bows family will continue to work with modern technology and time-honored values to bring the traditional archer the best equipment available in the cosmos.

Rick with the "first ever" Striker Bow

Rick Ellis from Striker Bows and New Breed Archery's Kyle Null have come together to present the new RK1. Its concept started long before napkin sketches and engineering mockups. The passion for traditional bows began in the woods for both Rick and Kyle, where a love for traditional simplicity and challenge still lives. Striker Bows and New Breed Archery have teamed up to offer the best of both worlds with a modern traditional bow design integrated with today's features. It's a perfect blend of Striker's limb design and forward handle riser shape along with New Breed's engineering flair and precision machined grip.

The RK1 features a fully machined aircraft grade 6061-T6 aluminum riser in a torqueless style grip typically available on modern compound bows. This feature allows for an easier transition for the compound archer to move into traditional archery equipment, and now the traditional archer can experience the nail driving accuracy of a torque free grip. The 16" riser height allows for enough sight window to shoot instinctively or attach a sight, but also short enough to give plenty of working limb at a 60" bow length resulting in a smoother shooting bow. Also featured is the flexibility to shoot directly off the shelf or with an elevated rest. This allows for transition between the woods to the 3D course without changing entire bow setups.

FEATURES:

- Available in 60" recurve or longbow limbs
- Brace height: 7½"-8"
- 30-60 lb draw weights at 28" in 5# increments
- Standard riser available in Black or Desolve Bare Camo
- Standard limbs available in Black Hydrographic Carbon Fiber
- Custom Hydrographic and color options available on riser and/or limbs
- Interchangeable 2-pin and bolt limb system between recurve and longbow limbs
- Riser is drilled and tapped for a standard AMO quiver or sight mount
- Stainless steel stabilizer insert
- 18 strand Fast Flight string
- 2 lb. mass bow weight

Recurve shown in Custom Target Green and custom raw carbon limbs

Custom Bows

Striker Bows has been a top builder of traditional custom bows in the archery world for 20 years. Offering one-piece and takedown bows, the custom shop represents our highest level of handmade quality using the best materials available. Customers have access to a large selection of exotic and action wood combinations to choose from for their custom traditional bow.

Precise draw weights and unique handle designs are crafted to accommodate even the most demanding archer. Before completing an order, the customer is invited to visit our facility during the fitting process to develop the most comfortable and effective grip for a truly custom built bow.

FastBack Custom Takedown

The Striker Custom Fastback continues the small, sleek handle design Striker is known for, but also gives the ability to create larger handle options for those who prefer it. Extended laminations on the backside of the shelf and handle section allow for even more customization in the handle fit. A 14" riser length gives the Fastback longer working limbs to eliminate handshock and stacking, all while having a shorter overall bow. The Fastback takedown is also interchangeable between recurve and longbow limbs.

FEATURES

- Longbow limbs: 56", 58" and 60"
- Recurve limbs: 58" and 60"
- Brace height: 7½" - 8"
- Interchangeable limb system
- String: Fast Flight 18 strand

Stinger Custom Takedown

The takedown that started it all. The Stinger Takedown was the first forward handle design to be offered in a takedown model. This is one of the slimmest in the industry. The Stinger Takedown is interchangeable between recurve and longbow limbs. A 14" riser gives the bow longer working limbs to eliminate handshock and stacking while still being a shorter overall length.

FEATURES

- Longbow limbs: 56", 58" and 60"
- Recurve limbs: 58" and 60"
- Brace height: 7½"-8"
- Interchangeable limb system
- String: Fast Flight 18 strand

Stinger Custom One Piece Longbow

FEATURES

- Longbow limbs: 56", 58" and 60"
- Brace height: 7½"-8"
- String: Fast Flight 18 strand

The Stinger custom is a one-piece longbow that sports a smaller, forward pistol grip style handle that includes a thumb rest designed to consistently position your hand correctly every time. The short 16" riser height allows for longer working limbs at a shorter overall bow length. These factors, along with the reflex-deflex limb design, results in a smooth drawing, quiet shooting, performance producing combination.

Custom Order Guide

Follow these simple steps below to create your truly unique custom bow:

Step 1: Specify Right/Left hand, draw weight range, limb style and bow length that is most suitable to you.

- Draw weight can range as low as 30# up to 60# (we guarantee +/- 2 lbs on draw weight)
- Limb style - Choose between longbow or recurve limbs.
- Bow Length - Choose between 56", 58", and 60" for longbow limbs. 58" and 60" for recurve limbs

Step 2: Choose your riser wood and limb veneer types:

- Solid wood riser - Choose one wood type for entire riser section
- 2-tone riser - Choose an outside wood type and inside wood type for riser section.
- Standard or premium upgrade wood options - Standard wood options come to you at no extra charge. Premium upgrade wood options are available at an additional charge

Step 3: Choose your riser striping colors:

- Outside striping - used on the outsides of each individual stripe
- Inside striping - a single piece on the inside of each stripe

Step 4: Personalize your bow:

- You have the option to add your name to your custom bow at no charge.

2-Tone Riser (Choose 2)

Standard or Premium Upgrade Woods

The Striker Classic TDR, a takedown recurve set at a 60" length, incorporates the trend of Striker's short riser design, allowing long working recurve limbs to give the shooter a smooth draw, making it a quiet shooting, high performing bow. Bocote wood is used for the riser section, as well as the limb veneers, for an exotic look that is sought after in the custom world without the custom price tag attached. The Classic TDR incorporates an interchangeable limb system making it possible to change out different Striker limbs without the need for custom fitting.

Classic TDR

FEATURES

- Modern recurve design
- 60" bow length
- Draw weight: 30-60# in 5# increments
- Brace height: 7½" - 8"
- Mass weight: 2 lb
- Interchangeable limb system
- String: Fast Flight 18 strand

Sport TDR

FEATURES

- Modern recurve design
- 60" bow length
- Draw weight: 30-60# in 5# increments
- Brace height: 7½"-8"
- Mass weight: 1.8 lbs
- Interchangeable limb system
- String: Fast Flight 18 strand

The Striker Sport TDR, a takedown recurve set at a 60" length, incorporates the trend of Striker's short riser design, allowing long working recurve limbs to give the shooter a smooth draw, making it a quiet shooting, high performing bow. Charcoal action wood is used for the riser section as well as the limb veneers for a sleek modern look. The Sport TDR incorporates an interchangeable limb system making it possible to change out different Striker limbs without the need for custom fitting.

Classic Longbow

The Striker Classic was designed with any style of shooter in mind. Natural Bocote wood is used for the riser and limb veneers for a natural, yet striking look. An overall length of 60" covers the bases on anything from target practice to deep cover hunting.

FEATURES

- Reflex-deflex longbow design
- 60" bow length
- Draw weight: 30-60# in 5# increments
- Brace height: 7½"-8"
- Mass weight: 1.6 lbs
- String: Fast Flight 18 strand

Sport Longbow

The Striker Sport was designed with the hunter in mind. Darker Charcoal actionwood was chosen for the riser wood and limb veneers. A shorter overall length at 58" was implemented for better mobility and ease in the woods.

The Sport Color Line, also shown, is available in an array of accent stripe colors.

FEATURES

- Reflex-deflex longbow design
- 58" bow length
- Draw weight: 30-60# in 5# increments
- Brace height: 7½" - 8"
- Mass weight: 1.2 lbs
- String: Fast Flight 18 strand
